HARISH A

Frontend Developer | React.js | TypeScript | Redux | Performance | 4+ Years Experience
9949825374 | harishavula3214@gmail.com | Immediate Joiner

PROFESSIONAL SUMMARY

Frontend Developer with 4+ years of experience building scalable, production-grade web applications with **React.js, TypeScript, Redux and JavaScript (ES6+)** for healthcare, pharma and biotech clients. Hands-on with React Hooks, component-based architecture and Redux state management, and experienced integrating front-end applications with RESTful APIs and back-end services. Delivered **~25% faster page loads** and **~30% fewer cross-device UI inconsistencies** through lazy loading, memoization and accessible, responsive design. Strong in error handling, fallback states and performance optimization, with Jest/React Testing Library, Jenkins CI/CD and Git-based workflows. Uses AI-assisted tools (GitHub Copilot, Claude Code) for code generation, test creation and debugging, validating output for correctness, security and maintainability. Comfortable working autonomously and making sound engineering trade-offs. **Available to join immediately.**

TECHNICAL SKILLS

Frontend: React.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, SCSS/Sass, Tailwind CSS, Bootstrap, jQuery, Responsive Design, UI/UX Design-to-Code, Cross-Browser Compatibility
State & Architecture: Redux, Context API, React Hooks, Custom Hooks, Reusable Components, Modular Architecture, Lazy Loading, Code Splitting, Memoization
APIs & Dashboards: REST APIs, JSON, Async/Await, Promises, Error Handling, Authentication, Data-Driven Dashboards (Tables, Filters, Sorting, Pagination)
Testing & DevOps: Jest, React Testing Library, Unit & Integration Testing, Git/GitHub, Jenkins CI/CD, Docker (basic), Agile/Scrum
Production Engineering: Error Handling, Fallback States, Performance Optimization, Production-Grade Web Applications
Quality: WCAG Accessibility, Inclusive Design, Performance Optimization, Code Reviews, Debugging, Cross-Browser Testing, OOP, Design Patterns, DSA
AI-Assisted Development: GitHub Copilot, Claude Code (code generation, unit test creation, debugging; validating output for security and maintainability)
Also Familiar With: Angular (working knowledge), Python, SQL, PHP

PROFESSIONAL EXPERIENCE

Software Engineer - Frontend (React.js) | Indegene | Feb 2025 – Dec 2025
- Built scalable, reusable **React.js + TypeScript** components with Hooks and clean design patterns for enterprise healthcare solutions.
- Converted UX designs into responsive, **WCAG-compliant** interfaces, cutting cross-device inconsistencies by **~30%**.
- Improved page load time by **~25%** using lazy loading, memoization and efficient state handling.
- Integrated REST APIs with backend engineers: secure authentication, async data handling, error states and fallbacks.
- Wrote unit and integration tests with **Jest and React Testing Library**; fixed browser-compatibility and UI defects quickly.
- Worked with Product, Design, Backend and QA in Agile sprints and code reviews; used GitHub Copilot and Claude Code.

Software Engineer - Frontend (React.js) | Audree Infotech Pvt. Ltd. | Jul 2021 – Aug 2024
- Built dynamic React.js applications on a reusable component architecture, **cutting development effort by ~25%**.
- Implemented **Redux** for centralized state management, improving data-flow consistency across complex multi-module applications.
- Integrated REST APIs and handled async operations with Promises, improving API call efficiency and reliability.
- Reduced unnecessary re-renders via memoization and optimized state updates, **improving UI performance by ~20%**.
- Followed clean-code practices, modular architecture and Git workflows; participated in peer code reviews on multi-module codebases.

KEY PROJECTS

Warehouse Management System – Hetero | React.js, Redux, HTML5, CSS3, Bootstrap
- Built data-heavy, interactive dashboards with tables, filters, sorting and pagination for real-time inventory tracking.
- Managed large-scale application state with Redux; implemented role-based authentication and optimized rendering.
- Integrated REST APIs for real-time inventory data with async handling, loading and error states.
- Built reusable table, filter and form components shared across modules, keeping the UI consistent and easier to maintain.
- Reduced unnecessary re-renders on large data sets with memoization and optimized state updates.

AmgenPro.jp (Japan) – Amgen | HTML5, CSS3, Bootstrap, JavaScript
- Built a secure healthcare web platform for a global biotech client with authentication and search.
- Delivered a responsive, cross-browser, accessible UI with optimized frontend performance.
- Built pages for Amgen's Japan-market website from UX designs, keeping them responsive and accessible.
- Implemented the secure login flow and search with validation, error handling and fallback states for a smooth user experience.
- Tested across browsers and devices and fixed UI defects with QA; worked with design and backend teams in Agile sprints.

EDUCATION

B.Sc, Kakatiya University (2019)
